

ADJUSTABLE MAGNET

Adjustable magnets, also known as adjustable magnets, are magnets with an external plastic moulding, giving different shapes depending on the need for fastening or fixing.

It is a type of magnetic closure characterised by the way it works. If you press, you open the door and if you press again you close it, with just one movement. A simple and practical application that absorbs the door and leaves it firmly closed.

Material	*
Form	Rectangle
Length (A)	*
Width (B)	*
Thickness (C)	*
Tolerance	+/- 0,1 mm*
Coating	Plastic

*These characteristics can be modified if made to measure.

WARNING

Magnets can disrupt the functioning of implanted pacemakers and defibrillators.

Do not bring electronic devices, watches, credit cards, magnetic cards, calculators, precision instruments, or other magnetic materials close together, as this may alter or irreversibly damage their proper functioning.
