

LOCK MAGNET

Locking magnets are a type of magnetic latches widely used in wardrobe doors of different sizes, materials and finishes. They are very easy to install and position.

Sometimes, they are adjustable so that you can choose the force exerted on the surface. If a practical and quick lock is required, it is very possibly the most suitable, as it is not necessary to use keys and we reduce the time used to close the compartments.

Material	*
Form	Rectangle
Length (A)	*
Width (B)	*
Thickness (C)	*
Tolerance	+/- 0,1 mm*
Coating	Plastic

*These characteristics can be modified if made to measure.

WARNING

Magnets can disrupt the functioning of implanted pacemakers and defibrillators.

Do not bring electronic devices, watches, credit cards, magnetic cards, calculators, precision instruments, or other magnetic materials close together, as this may alter or irreversibly damage their proper functioning.
