

RECESSED MAGNETS

Snap-in magnets are designed to be fitted into holes previously made in wood or any other material.

The magnet has to be well embedded in the hole, for this reason, you must press it until you check that it has been held perfectly.

They are very discreet locking systems as the magnet is fitted into a hole and only the upper part of the magnetic lock can be seen, the rest is hidden inside the wood.

Material	*
Form	Cylinder
Length (A)	*
Width (B)	*
Tolerance	+/- 0,1 mm*
Coating	Plastic

^{*}These characteristics can be modified if made to measure.

Magnets can disrupt the functioning of implanted pacemakers and defibrillators.

Do not bring electronic devices, watches, credit cards, magnetic cards, calculators, precision instruments, or other magnetic materials close together, as this may alter or irreversibly damage their proper functioning.
